

## Gesellschaft für Logistische Systeme LS GmbH – our Partnerships –

For 15 years OSIS, the Open System Integration Server, has been tested and proven in operation and is continually being developed to incorporate innovative new technology. Strategic partnerships have been created for the marketing and installation of OSIS in certain branches, by working together with IT service companies and for the introduction of OSIS in the process integration of EAI and EDI scenarios with requirements of ever increasing complexity. The latter point, in particular, allows us to continually accompany the development of our product with its use in productive situations.

Some examples of our partnerships are as follows:

OSIS is certified by the SAP AG for the NetWeaver and the ALE-Technology and is recommended as the Software-Interface for all SAP R/3 versions.

The VÖB-Service GmbH, Gesellschaft des Bundesverbandes Öffentlicher Banken Deutschlands, is our marketing and project partner for OSIS in the branches of banking and financial institutions.

The Kompetenzzentrum Logistik der CSC Ploenzke AG is our partner for the marketing of OSIS as the communications interface and interface management system in the building industry.

With the BLG LOGISTICS GROUP we have a working relationship that goes back many years in the development of EAI and EDI solutions for the shipping terminals and the logistics of the Supply Chain Management for the transport distribution.

The EUROGATE Container Terminals in Bremerhaven and Hamburg are our partners in the development of the OSIS-Business-Integration-Plattform, a further development of the OSIS technology using a database and a browser orientated GUI for the creation and resolving of messages according to particular business processes.

The NTB North Sea Terminal in Bremerhaven is a key driver for the further development of the OSIS technology due to the complex requirements of the integration of business processes.

## Gesellschaft für Logistische Systeme LS GmbH – our Partnerships (continued) –

The dbh Logistics IT AG is, among other things, operator of the Bremen ports community system (BHT, Bremer Hafentelematik), an information platform for the exchange of data between the transport management companies and the port authorities in Bremen / Bremerhaven and Hamburg. The interface to the BHT is a key part of many of our EDI projects in the area of harbour transport and business.

We have had a working relationship with the Bon appétit Group AG in Switzerland for many years, this relationship now continues with the REWE- Informations-Systeme Schweiz AG as a result of the takeover of Bon appétit by the REWE Group. Additionally due to their experience with OSIS gained in Switzerland, the REWE-Informations-Systeme GmbH in Köln has now identified OSIS as the strategic product for the REWE Group in Germany.

For our activities and those of our subsidiary in Switzerland (Logistische Systeme LS GmbH, Zuerich) we have formed a partnership with the Xpert Consulting AG and the ERPsourcing AG in the area of SAP applications. The Xpert Consulting AG has SAP basis and infrastructure specialists. They have a joint venture with the ERPsourcing AG, an ASP-Provider for SAP applications and a subsidiary of the SAP (Stäfa) GmbH.

The OSIS Moduls from the OSIS Communication Layer (adapters) and the Syntax & Semantics (EDI) Layer are integrated as standard in the modern, object oriented software SYSTEM4 ERP from bbt electronics GmbH. The SYSTEM4 ERP has been especially developed for the production, trade and service enterprises.

## Gesellschaft für Logistische Systeme LS GmbH – our Partnerships (continued) –

As partner of the PROUT AG we offer an interface between OSIS and the PROUT inFORM system from PROUT Software GmbH. PROUT inFORM is an output management software with a modular construction (i.e. for printing, print distribution, formula management, barcodes, archiving). OSIS acts as interface management system passing data from the applications to the output management software and from this software per EDI to the partners concerned.
